

# **Consolidated Pumps Ltd.**

## **FIRE FIGHTING BOOSTER SET**

EN 12845 compliant booster units for automatic fire-fighting systems. The standard version comprises a diesel pump that can be coupled with one standardised electric pump, together with a compensation pump, if required.

### **OPERATION**

The pilot pump (if fitted) starts whenever there is a pressure drop in the system. If this is insufficient to recover pressure, the primary electric pump starts (if the unit comprises an electric pump and a diesel pump). A continuously charged battery and fuel tank ensure the diesel pump starts and operates in case of a power failure.

**Flow up to 440 M3/HR**  
**Head up to 13 Bar**
